

Environmental Policy Statement

At Seevent Plastics we consider the environmental impact of all our actions.

We set legislated targets as our minimum objective and recognise our responsibility not only to the environment as a whole but also to our neighbours and staff. Legislation targets include those defined in our part B permit issued by Adur District Council and, Energy reduction as required in the Climate Change Levy (CCL) Agreement.

We identify and comply with all legal requirements applicable to our industry including, The Environmental Protection Act (Solvent Emissions Directive) and, The Packaging and Packaging Waste Regulations.

Wherever possible we adopt best industry practice, utilise current advances in technology and follow guidelines issued by the Environment Agency. We benchmark our activities against the largest film producer in Europe.

All our products are recyclable. They have been carefully designed to minimise the environmental impact through using less material and energy than traditional materials.

Whenever possible, we re-cycle our own waste thereby reducing the amount of prime materials we use.

We seek to minimise scrap and urge our partners and suppliers to do the same. We also operate environmentally sound transport arrangements.

To ensure the success of our environmental policy, we monitor all materials arriving and leaving our site in order to check that our own targets are being met.

We encourage our staff to contribute to the development of our working practices, in order to improve our performance, reduce our environmental impacts and, operate as good, responsible, neighbours.
